Subsidiary of Federal Signal Corporation

Hi-Rail Option

Guzzler Manufacturing's Hi-Rail option for the Guzzler Classic offers the industry's most advanced truck mounted industrial vacuum for the extreme demands of the rail industry. Get all of the standard features and legendary performance of a Guzzler Classic while enhancing your application offering of a dedicated high rail vacuum loading unit.

These unique features include:

- Total operator control of the vacuum truck from a rear mounted control station.
- Full visibility of the boom and rail area by the operator from the control station.
- A hydrostatic drive system that allows quick change of direction with a convenient forward and back joystick.
- The operator station provides full control of the vacuum system, high rail boom and all safety features, such as the emergency stop and vacuum relief.
- Ergonomically designed control layout, including easy to use joystick, and swivel chair that locks into position ensures operator comfort and productivity.
- Additional safety is provided with a specially designed high rail camera option increasing operator visibility of blind spots.

Specs:

- Full vacuum control up to 5,250 CFM and 28" vacuum.
- Forward and reverse hydrostatically controlled via a heavy duty creep drive transfer case.
- Quickly access remote job sites by driving on the rails as with traditional rail gear options, or upgrade to the full high rail option providing quick operator setup from the control station.
- Specifically designed high rail boom designed for the harsh conditions of cleaning rails and switches.
